

PJ.05.02 Multiple Remote Tower and PJ.05.03 RTC

COOPANS Multiple Remote Tower trials OPEN DAY in Växjö at Saab

Thursday 21/3 2019

Welcome to Saab Växjö validation platform where our Multiple Remote Tower trials take place during March.

The exercise performed by COOPANS, in cooperation with NATMIG, is named PJ.05.02-EXE.002-V3 and PJ.05.03-EXE.002-V2. Focus of the exercise is to take the development from previous V2 up to V3 maturity level on the Multiple Remote Tower concept. PJ.05.03 focus is to deliver a V2 mature flexible allocation of aerodromes within a Remote Tower Centre. These exercises will handle 2 simultaneous aerodromes and 3 simultaneous aerodromes in two separate exercises.

There will be 2 parts of the exercise developing the different concepts. The first part consists of runs looking at different operational aspects on a mature Industrial Platform to finalise requirements for Multiple Remote Towers. The second part contains further investigation of HMI with tools and features for the ATCO in a MRTM adapted for 3 simultaneous aerodromes.

We invite you to our open day to give you a chance to see this next step in development of the Multiple Remote Tower concept and future Remote Tower Centres.

Schedule:

- | | |
|-----------------|--|
| ➤ 09.30 - 10.00 | Welcome and registration at Växjö - Coffee |
