

# HungaroControl

## Remote Tower for Multiple Airports

Mr. Csaba Gergely  
22 November 2017

 **HungaroControl**  
Straight to the point

# HUNGAROCONTROL – MORE THAN AN ANSP

- Air navigation services without borders
- R&D knowledge centre
- International ATC training academy
- Tailor-made simulation and validation services
- The 1st 100% free route airspace in Europe
- The 1st proven remote tower solution for mid-size airport
- Contributor of European ATM R&D initiatives

**HUNGARY**

**KFOR SECTOR**

Upper airspace  
over Kosovo

**Unit rate in 2016:**

~ € 35  
(one of the lowest in the Region)

**Annual traffic in the  
Hungarian airspace:**

~ 800 000  
movements

**Annual traffic at  
Budapest airport:**

~ 100 000  
movements

**Annual traffic in the  
KFOR airspace:**

~ 70 000  
movements

**Annual turnover:**

over  
€ 120  
million

**Performance:**

avg.  
0.01 mins  
delay/flight

**Human  
Resources:**

~ 750  
employees

# REMOTE TOWER

A new approach for mid-size airports

# What is a rTWR?

By 2019, HungaroControl aims to operate a full-time remote tower in Budapest. Budapest airport will be the first remotely controlled airport of its size and complexity, with over 100,000 movements per year.

# rTWR for multiple airports

The concept of multiple remote towers can further maximize the cost savings realized through the implementation of Remote Tower services. The basic notion of the concept is for a single Air Traffic Control Officer (ATCO) to deliver control services to multiple airports simultaneously from a single working position.

# What are the benefits of a rTWR?

1

## Operational benefits

- Increased situational awareness
- More convenient workplace & working position
- Increased capacity (e.g. LVP/normal)
- To have a chance for real solutions 100% tailored to your needs
- To exploit the advantages of augmented reality

2

## Financial benefits

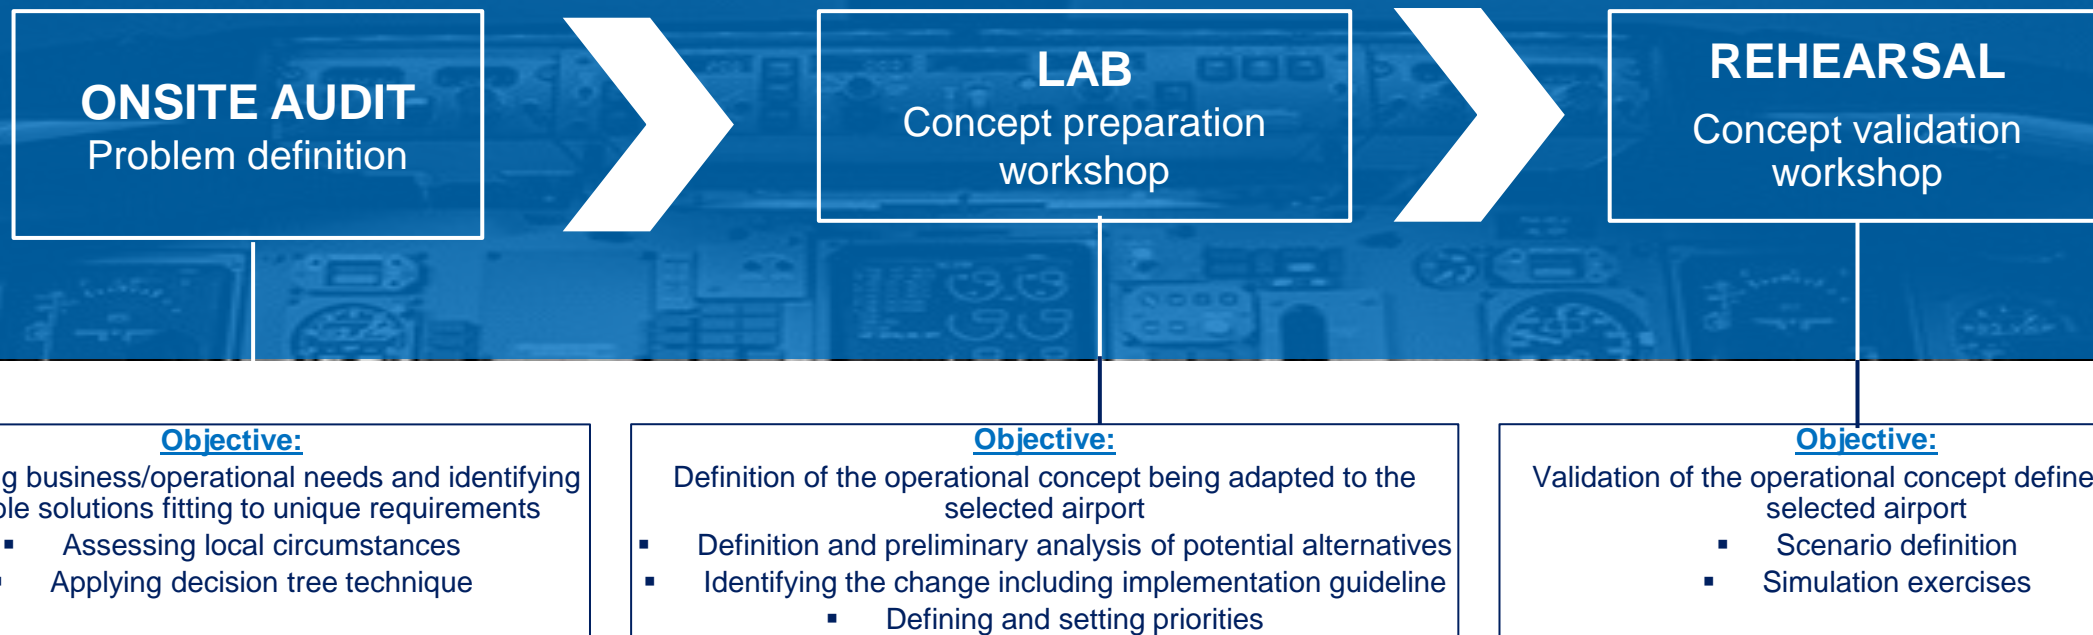

- Less capital expenditure considering normal office building
- Less operational expenditure considering camera and data connection infrastructure
- Optional: decreased number of ATCOs
- Less cost related to the ATCO's training

3

## Safety benefits

- Enhanced safety
- Increased situational awareness
- Increased capacity (e.g. LVP/normal)
- High definition cameras technology to safely and securely manage air traffic

# DESIGN YOUR OWN REMOTE TOWER SOLUTION!

1

Continuous innovation activities have positioned us at the forefront of European R&D initiatives

2

Use operational experience to support your development plans

3

Multiply your aerodrome service cost-consciously (both remote and conventional)

4

Improve situational awareness

5

Enhance safety in the most vulnerable situations

6

Get closer to new level of aerodrome ATM services

**Experience-based  
advisory**

**Thank you for your attention!**
